

TRILLIONS PER SECOND

A Hardcore Manual for Hacking the Simulation

(DRAFT v1.0)

by ~C4Chaos

Dedication

This book is dedicated to all seekers, and to my son, F.Raven, should he choose to walk the seeker path someday.

Table of Contents

[Disclaimer: Warning—Ego Dissolution Ahead](#)

[Foreword](#)

[Preface](#)

[Acknowledgement](#)

[Introduction: Waking Up in the Flux](#)

[PART 1: The Simulation - Deconstructing Reality](#)

[CHAPTER 1: Reality as a High-Frequency Flux of Kalapas](#)

[CHAPTER 2: The Illusion of Solidity \(Ghana\)](#)

[CHAPTER 3: The Dream Within a Dream - Mental Projection and Ignorance](#)

[PART 2: The Hack - Activating Impermanence \(Easy-to-Follow Practice Manual\)](#)

[CHAPTER 4: Developing High-Resolution Attention](#)

[CHAPTER 5: Perceiving Dissolution \(Bhanga\)](#)

[CHAPTER 6: Navigating Challenges and Maps in the Hack](#)

[PART 3: The Result - Freedom, Not Escape](#)

[CHAPTER 7: Achieving Freedom Within the Flux](#)

[CHAPTER 8: Integration and Lifelong Hacking](#)

[PART 4: Personal Codex - The Author's Journey](#)

[CHAPTER 9: My Path Through the Flux: Challenges, Fears, and Breakthroughs](#)

[Afterword](#)

[Appendix: Resources, Glossary, Source Materials](#)

[Addendum: On Morals, Ethics, Science, Technology, and Philosophy](#)

[About the Author](#)

Disclaimer: Warning—Ego Dissolution Ahead

This manual may glitch your sense of self. Potential side effects include: acute existential dread, visions of pixelated reality, profound skepticism toward “solid” matter, and an irresistible urge to question the refresh rate of existence. Proceed at your own perceptual risk; no refunds on shattered illusions.

Foreword

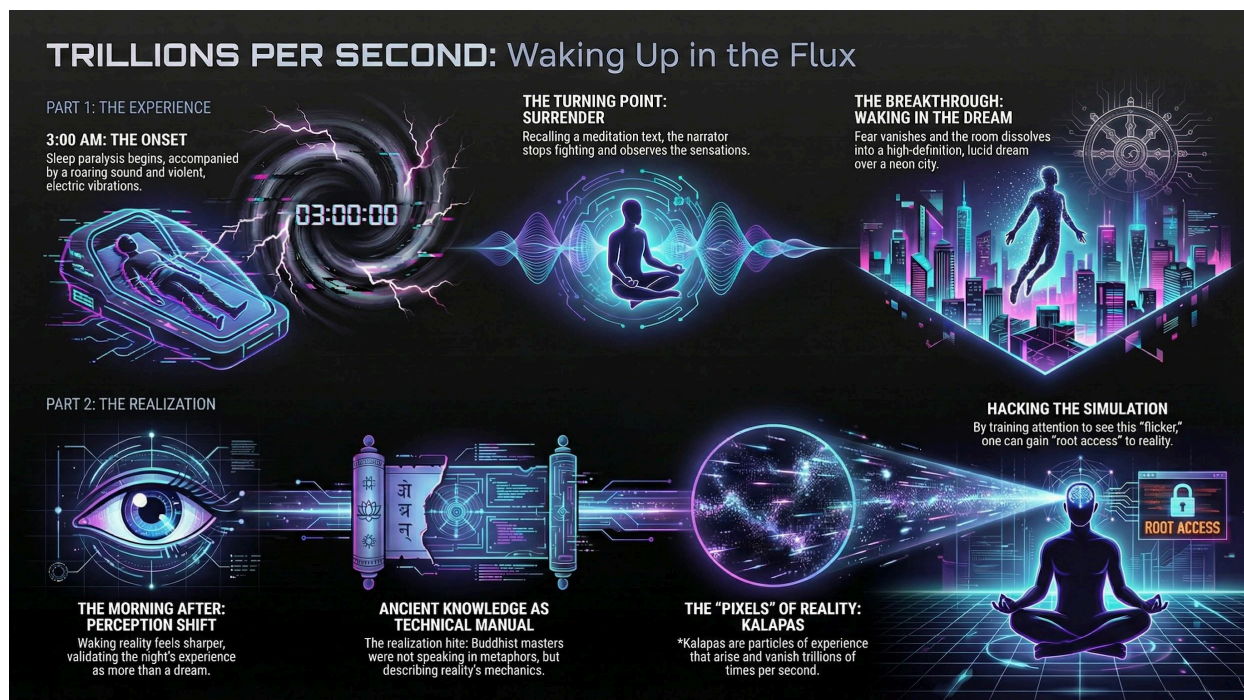

[Ask Shinzen Young, Daniel Ingram, and Vince Horn to write a foreword.]

Preface

[Author's note on the book's creation or purpose.]

Acknowledgement

[A heartfelt nod to the lineage of teachers and sources that form the book's foundation, emphasizing how their teachings converge on the thesis of hacking impermanence through kalapas. Highlight the non-mystical, sensory experiences to avoid spiritual bypassing.]

Introduction: Waking Up in the Flux

It was 3:00 AM. The witching hour for insomniacs, coders, and accidental mystics.

I woke up, but I couldn't move. My body felt heavy. Pinned to the mattress by an invisible gravity well. Sleep paralysis. Usually, this is where the panic sets in. The lizard brain screams about aliens, predators, and monsters in the dark.

Then the sound started.

A high-pitched whine. *Eeeeeeeeeee*. Right in the center of my skull. It wasn't tinnitus. It was louder. Sharper. It ramped up like a turbine engine spinning to failure.

The whine turned into a roar. Then the shaking began. It wasn't a seizure. It was a vibration. Subtle at first, then violent. It felt like gripping a live wire—220 volts buzzing through my marrow. My teeth felt like they were rattling loose. The fear spiked. The biological imperative shouted: Danger. Wake up. Move.

But I didn't move. A memory flashed.

Just hours before, I'd been reading Daniel Ingram's *Mastering the Core Teachings of the Buddha*. It's a thick, no-nonsense manual on hardcore Buddhist dharma. He wrote about this specific territory. The Arising and Passing Away. The energy currents. The sensory overload. He said it was normal. He said not to freak out.

So I ran an experiment.

I ignored the panic. I didn't try to break the paralysis. Instead, I leaned into the buzz. I surrendered to the voltage. I turned my attention toward the vibration itself. I observed it. Surrendered to it. I surfed the waves.

Buzzing. Shaking. Intense. Loud.

The moment I stopped fighting, the fear evaporated. The heaviness vanished. The room dissolved into pixelated static.

Suddenly, I was flying.

I was soaring over a city made of neon glass and impossible geometry, the air humming with electric wind. I looked at my hands. They were melting. I knew: I am dreaming. This isn't the waking world, but I am awake in it. The resolution was crisp. High definition. 8K clarity. No blur. No fog. Just pure, unadulterated consciousness playing in the sandbox. I laughed out loud as I dissolved into deep dreamless sleep.

I woke up for real the next morning. The coffee tasted different. The sunlight hitting the kitchen table looked sharper. It hit me then.

Those crazy Buddhist masters were right. And not just in some vague, enlightened way—they had the specs on reality itself.

The Burmese meditation masters. The forest monks. The guys sitting in caves while the rest of us were building civilizations. They weren't speaking in metaphors. They weren't writing poetry. They were writing technical documentation.

The vibrations are real.

In the lineage of U Ba Khin and S.N. Goenka, they talk about *kalapas*.

It's a Pali word. It means 'bundles' or 'units.' These are the subatomic particles of experience. The smallest building blocks of reality—subjective reality to be exact.

U Ba Khin didn't have an electron microscope. He had something better.

He had a mind trained to high-speed sampling. He taught that matter isn't solid. It's a flux. He said these kalapas arise and vanish trillions of times

per second. They flash in and out of existence. Combustion. Dissolution.

He called it *bhanga*.

It sounds like quantum physics—or a computer's refresh rate. And in a way, that's exactly what it is, experientially.

We think we live in a solid world. We think this book, your hand, the people around you, the chair you're sitting on, are static objects. They aren't. They are events. They are processes happening at a speed so fast that your crude sensory hardware blurs them into solids. It's the same way a fan blade looks like a solid disk when it spins fast enough.

The simulation relies on this blur. It relies on you not looking closely enough to see the pixels.

But if you train your attention. If you upgrade your sampling rate. If you learn to note the raw data of your senses at the speed of the processor.

You start to see the gaps. You see the flicker.

You see the kalapas.

This isn't mysticism. It's first principles reverse engineering. The moment you perceive the vibratory nature of reality, you stop being a passive user. You gain root access. You realize that the 'self' you're so worried about is just another pattern in the noise. Just another waveform in the ocean of trillions per second.

That is how you hack the simulation. You don't do it by believing in magic. You don't do it by positive thinking or buying crystals.

You do it by observing the data.

This book is the manual. We are going to strip away the rituals. We are going to ignore the religious dogma. We are going to look at the mechanics of the mind with the cold, hard precision of a systems administrator debugging a server.

In the pages ahead, we'll dive into the code—starting with those kalapas in Chapter 1.

Grab your cushion. Boot up your awareness. It's time to log in.

PART 1: The Simulation - Deconstructing Reality

[Focus: Theoretical synthesis demystifying the illusion, drawing on Abhidhamma, Goenka's ultimate vs. apparent reality, and Ingram's perceptual models.]

[Infographic here]

CHAPTER 1: Reality as a High-Frequency Flux of Kalapas

[Topic: Defines kalapas as momentary sensory bundles (not literal particles), arising/passing trillions per second, per U Ba Khin and Abhidhamma. Synthesizes with Shinzen's "flow" and Goenka's vibrations, using simulation metaphors for accessibility.]

CHAPTER 2: The Illusion of Solidity (Ghana)

[Topic: Explores how the mind compacts kalapas into “solid” forms, hiding impermanence (Mahasi’s compactness). Integrates Ingram’s early insight stages and Goenka’s sankharas as the “glue” sustaining the illusion.]

CHAPTER 3: The Dream Within a Dream - Mental Projection and Ignorance

[Topic: Frames the simulation as ignorance-fueled projection (avidya), synthesizing Goenka's mental formations with Shinzen's deconstruction and Ingram's no-self insights.]

PART 2: The Hack - Activating Impermanence (Easy-to-Follow Practice Manual)

[Focus: Step-by-step manual emphasizing kalapa

strategy—overclocking attention via noting and sweeping to activate impermanence. Synthesizes Mahasi's noting, Goenka's scanning, Shinzen's techniques, Ingram's maps, and U Ba Khin's equanimity.]

[Infographic here]

CHAPTER 4: Developing High-Resolution Attention

[Topic: Foundational practices to sharpen perception, starting with basic noting (1-2/sec) and body sweeps to feel kalapa vibrations.]

CHAPTER 5: Perceiving Dissolution (Bhanga)

[Topic: Advanced techniques to witness bhanga, breaking ghana through high-speed noting (5-10/sec) and “gone” labeling.]

CHAPTER 6: Navigating Challenges and Maps in the Hack

[Topic: Addresses obstacles like dark nights, with maps from Ingram and Mahasi, plus integration strategies from Shinzen.]

PART 3: The Result - Freedom, Not Escape

[Focus: Outcomes and lifelong application, emphasizing realization within the flux.]

[Infographic here]

CHAPTER 7: Achieving Freedom Within the Flux

[Topic: Describes post-bhanga liberation, synthesizing Goenka's nibbana, Ingram's paths, and Shinzen's skillset view. Nirvana vs. the Sumilation.]

CHAPTER 8: Integration and Lifelong Hacking

[Topic: Applies hacks to daily life, work, and tech (e.g., AI as dharma aid), drawing on postmodern takes from Ingram and Shinzen.]

PART 4: Personal Codex - The Author's Journey

[Infographic here]

CHAPTER 9: My Path Through the Flux: Challenges, Fears, and Breakthroughs

[Topic: Author's personal narrative, sharing decades of dharma exploration, failures, dark nights, and successes in perceiving kalapas/bhanga, and psychedelics.]

Afterword

[Topic: Reflections on the book's themes and the writing process. I wouldn't have been able to write this book without AI. This book was prompted into existence. It's a passion project for myself and for those geeky enough to walk this path. When I say "I create" or "I write", I mean **prompt** it into existence! I do the curation of source materials to make sure that AI doesn't hallucinate. I come up with the core concepts, outline, theme, design, branding, etc. I iterate and then finalize it once it passes my **taste**. So in short, I'm the conductor of the AI symphony! The result: A cyborg dharma for the cyborg age!]

Appendix: Resources, Glossary, Source Materials

[Topic: Curated list of source materials, readings, glossary, and tools
(e.g., apps for noting).]

Addendum: On Morals, Ethics, Science, Technology, Intermediate Realms of Power, and Philosophy

[Topic: Discuss the crucial roles of Morals (Sila), Ethics, Science, Technology, Intermediate Realms of Power, and Philosophy on one's hardcore dharma practice.]

About the Author

~C4Chaos is a digital-native pseudonymous author with a background in tech and hardcore dharma. Using large language models as research tools, the author has deconstructed the *Abhidhamma*'s analysis of momentary phenomena and mapped it to Simulation Theory. A practitioner in the lineage of U Ba Khin, Shinzen Young, and Daniel Ingram, ~C4Chaos focuses on the ultrafast flux of sensory experience—the “Terahertz Gap.” This pseudonym is maintained to ensure the "Signal" of the manual remains unburdened by the "Noise" of a personal human biography.
